

BUG REPORT

TITLE

User is registered even though the date of birth was entered incorrectly on the registration form

DESCRIBE

If, in the registration form, the user correctly fills in the required fields and enters an incorrect date of birth (non-existent, e.g. 30.02.2000, or incomplete, i.e. one or two fields are left blank), an account will be created when the "Register" button is clicked. In such cases, when the "Register" button is clicked, the account should not be created and the application should display an error message: "Invalid date of birth".

STEPS TO REPRODUCE

1. Go to sign in page:
<http://www.automationpractice.pl/index.php?controller=authentication&back=my-account>
2. In the "CREATE AN ACCOUNT" section, in "Email address" field, enter a correct (validated) e-mail address, e.g. "test000@test.test".
3. Click "Create an account" button — you will be taken to the registration form.
4. Fill in required fields ("First name", "Last name", "Password") with correct values.
5. In the "Date of Birth" section, enter a non-existent date (e.g. 30.02.2000) or an incomplete date (leaving one or two fields blank).
6. Click "Register" button.

ACTUAL RESULT

The application creates an account and goes to the user's profile page.

Authentication

CREATE AN ACCOUNT

YOUR PERSONAL INFORMATION

Title
☐ Mr. ☐ Mrs.

First name *
Ewelina ✓

Last name *
Paris ✓

Email *
test000@test.test

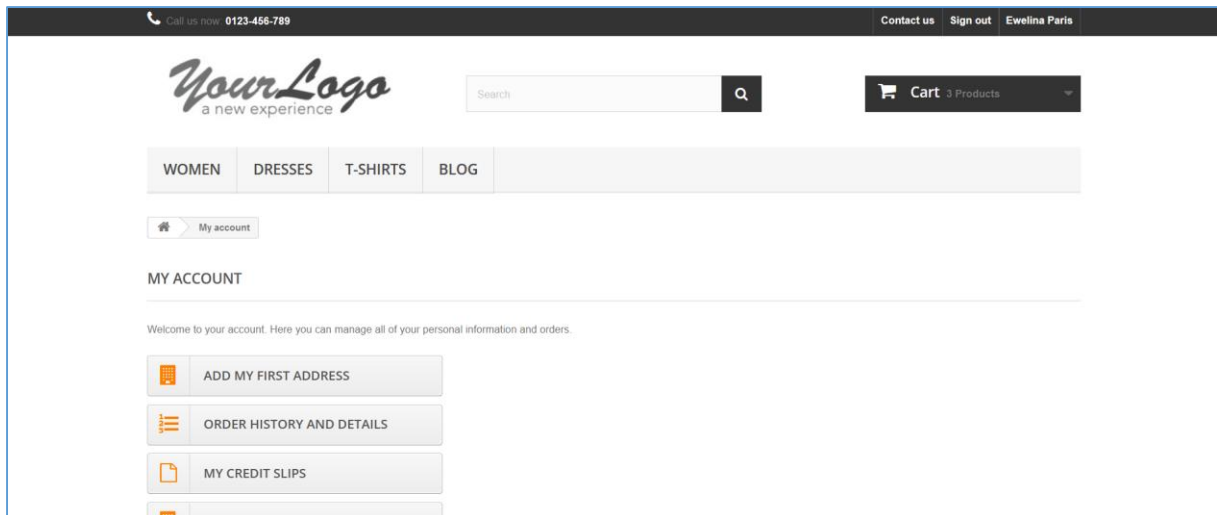

Password *
***** ✓
(Five characters minimum)

Date of Birth
30 / Febru. / 2000

☐ Sign up for our newsletter

Register >

*Required field

EXPECTED RESULT

The application does not create an account, remains in the registration form and displays an error message: "Invalid date of birth".

ENVIRONMENT

Test, any browser.

PRIORITY

High.
